

## Learn Drupal in 30 Days: Tackling Drupal Day By Day

So you are thinking of building a website and heard of this thing called Drupal. After doing some research, you are probably feeling like pulling your hair out (whats left of it anyway) and no closer to launching your first Drupal website. Does this sound familiar? I have heard this story over and over again, and, to be honest, it happened to me too. I still remember my first Drupal website, 6 years ago sitting in my basement. Back then, I didnt know the difference between a theme template file and a module file, but now I do, and I want to teach you what I have learned over the years. I have found that while there are great resources available for learning Drupal, they are spread out and often disorganized. This is my attempt to pull it all together for you, so you dont have to do all the research. You might be wondering how this works? Well, over the course of the next 30 days you will be able to learn the basics of Drupal. You will start at the very beginning and develop the core skills required to build your Drupal 7 website. So get ready to learn and in 30 days you will have your first Drupal website ready to launch and you will be one step closer to sipping Mai Tais on a remote beach somewhere (or whatever your idea of fun is).
