

The Role of Logic Modeling in a Collaborative and Iterative Research Process: Lessons from Research and Analysis Conducted with the Federal Voting Assistance Program

The report describes the underlying method of collaborative logic-model development and application and frames the approach in generalizable step-by-step terms, drawing from research and analysis conducted in conjunction with the Federal Voting Assistance Program. The report derives from a more-detailed report that more fully documents both the process and its results, including recommendations, guidance, and organizational change.
