

Multitenant Utility Computing on IBM Power Systems Running AIX

This IBM Redbooks publication presents concepts, considerations, and high level deployment examples for technical professionals who design and operate multitenant utility computing environments hosted on IBM System p and IBM AIX Enterprise Edition. AIX Enterprise Edition brings together IBM enterprise management capabilities from Power Systems™, IBM AIX, and Tivoli Software to provide a powerful set of integrated functions for infrastructure management in multitenant utility computing environments. In this book, we focus on the following topics: Using System p, IBM AIX 6, and PowerVM™ virtualization technologies Provisioning in a multitenant computing environment on AIX and Power Systems Monitoring resources in a multitenant environment Accounting and chargeback in a multitenant AIX environment AIX Enterprise Edition brings together several IBM products: AIX 6 operating system, IBM PowerVM Workload Partitions Manager™, Tivoli Application Dependency Discover Manager, Tivoli Monitoring, and IBM Usage and Accounting Manager Virtualization Edition for Power Systems. In addition to these products we also provide a system allocation example using Tivoli Provisioning Manager.
