

Stone on CGIDEV2

This training manual starts you off by explaining how to download, install and configure the CGIDEV2 toolkit on your AS/400. It then takes you through each of the subprocedures included in the toolkit.

Each section clearly explains how and when to use each subprocedure as well as any input and output parameters that are required. Understanding what you are doing is just as important as actually doing it. And these chapters will really open your eyes to the fantastic power and functionality of the CGIDEV2 toolkit

The chapters that follow show you how to use each of the subprocedures in a real programming environment. Even if you're a beginner, the first example will get you started quickly and easily with the Hello World application. The training manual goes on to explain and give examples of outputting dynamic content using CGIDEV2's trademark, the HTML template. Media: Self-paced manual with source code CD. Estimated completion time: 16 hours.
