

Helping Adolescents at Risk: Prevention of Multiple Problem Behaviors

Written by leading authorities, this comprehensive volume reviews current knowledge about multiple problem behaviors in adolescence, focusing on what works in prevention and treatment. Cutting-edge research is presented on the epidemiology, development, and social costs of four youth problems that frequently co-occur: serious antisocial behavior, drug and alcohol misuse, tobacco smoking, and risky sexual behavior. A framework for reducing these behaviors is outlined, drawing on both clinical and public health perspectives, and empirically supported prevention and treatment programs are identified. Also addressed are ways to promote the development, dissemination, and effective implementation of research-based intervention practices.
