# Protecting your PC against hackers

Hacking, viruses and other malicious software continues to increase and cause serious problems for organisations and individuals. The software and hardware available to help protect computers and information are often effective, but those responsible more often than not choose to attack the weakest component of systems, that is the human element, by using and taking advantage of human behaviour. This was an emerging threat in 2003 when this book was written, and has become a significant threat since.
