

Interconnecting Cisco Network Devices (Cisco Career Certifications)

For Courses in Cisco CCNA certification and Networking. Based on the Cisco course taught worldwide, Interconnecting Cisco Network Devices teaches students how to configure Cisco switches and routers in multiprotocol internetworks. ICND is the primary course recommended by Cisco Systems for CCNA Exam #640-507 preparation. The student will learn the fundamentals of interconnecting Cisco network devices in five modules: getting started with Cisco networks (assembling, cabling, operating, configuring, and managing devices); interconnecting Catalyst switches (fundamental switch operations and VLAN configuration); interconnecting Cisco routers (TCP/IP, IP routing, traffic management, and IPX configuration); extending the network to WANs (serial point-to-point connections, ISDN BRI, and Frame Relay PVC connections); and supplemental appendixes (AppleTalk, HyperTerminal, Cisco 700 series routers, and password recovery techniques).
