

Mount London: Ascents in the Vertical City

An invisible mountain is rising above the streets of the capital - and at over 1,800 metres, it is Britain's highest peak. This ingenious new book is an account of the ascent of Mount London by a team of writers and urban cartographers, each scaling a smaller hill within the city - from Crystal Palace (112m) to Primrose Hill (78m). The essays and stories in *Mount London* unpeel London's history and geography, reimagining the city as mountainous terrain and exploring what it's like to move through the urban landscape. Ascents of natural peaks are offset by expeditions to the city's artificial mountains - The Shard (306m), the chimneys of Battersea Power Station (103m) - the search for ghost hills in the back streets, and a descent into the deepest part of the Tube. *Mount London* is a unique and visionary record of the vertical city.
