

Netscape™ for Macintosh®: A hands-on configuration and set-up guide for popular Web browsers

Netscape has captured the lions share of the Web browser market. Its advanced features make it the premier Internet navigation tool you can use. The Macintosh is ideally suited to take advantage of the features of Web browser like Netscape since most Macs are already set up to run the basic capabilities that you will need including graphics and sound. This book will show you how to set up and configure Netscape, as well as a variety of other Web Browsers for the Macintosh, including NCSA MacMosaic, PLUSMosaic, MacWeb, and NetShark. As well as providing an up-to-date snapshot of some of the best web sites around, the author also includes an introduction to Netscape 2.0 for the Macintosh and illustrates some of its powerful new features.
