

Take Control of Making Music with GarageBand 11

Seattle composer Jeff Tolbert goes to 11 with his step-by-step instructions that guide beginning and intermediate users through using GarageBands built-in loops to create three songs, explaining not only how to use GarageBands editing and mixing features but also how to be playful and creative while composing tunes that please the ear. Youll learn how to plan a song, get the most out of Magic GarageBand, edit and arrange Real Instrument and Software Instrument loops in numerous ways, create exciting mixes, and export your masterpieces. The book also covers how to change track volume, tempo, and panning dynamically, and how to work with GarageBands effects. Plus, it includes seven suggestions for solving performance problems. Bonus! Linked-in audio lets you listen to examples you can even download the actual GarageBand project files used to create them! To round it all off, a five-page glossary helps you quickly learn music-related terms. Questions youll find answers to include: Whats the arrange track used for? How can I use the stock GarageBand loops to make a cool song? How can I expand my collection of loops? How do I edit Software Instrument loops? I dont read music. Why do I care about Notation view? How do I change the tempo in different sections of my tune? How do I make my mixes more dynamic and interesting? How can I use GarageBand to score a video? How can I customize a Magic GarageBand song so it doesnt sound like everyone elses? How do I make a killer drum break out of GarageBand loops? How can I make a ringtone for my iPhone? I had a tough time getting started with GarageBand until I bought Take Control of Making Music with GarageBand. -Lyle H.
