

# Structure of Solutions of Variational Problems (SpringerBriefs in Optimization)

Structure of Solutions of Variational Problems is devoted to recent progress made in the studies of the structure of approximate solutions of variational problems considered on subintervals of a real line. Results on properties of approximate solutions which are independent of the length of the interval, for all sufficiently large intervals are presented in a clear manner. Solutions, new approaches, techniques and methods to a number of difficult problems in the calculus of variations are illustrated throughout this book. This book also contains significant results and information about the turnpike property of the variational problems. This well-known property is a general phenomenon which holds for large classes of variational problems. The author examines the following in relation to the turnpike property in individual (non-generic) turnpike results, sufficient and necessary conditions for the turnpike phenomenon as well as in the non-intersection property for extremals of variational problems. This book appeals to mathematicians working in optimal control and the calculus as well as with graduate students.

**Convergence of Solutions of Optimal Control Problems with Turnpike Properties for Nonconcave Problems** a new result on agreeable solutions for variational problems with extended-valued integrands. **Convex Autonomous Problems - Springer** Structure of Solutions of Variational Problems is devoted to recent progress made in the studies of the structure of approximate SpringerBriefs in Optimization. **Structure of Approximate Solutions of Optimal Control Problems - Google Books Result** Turnpike Properties for Nonconcave Problems a new result on agreeable solutions for variational problems with extended-valued integrands. **Turnpike Theory of Continuous-Time Linear Optimal Control Problems - Google Books Result** Turnpike Theory of Continuous-Time Linear Optimal Control Problems. Volume 104 of the series Springer Optimization and Its Applications pp 21-84 We study the structure of approximate optimal trajectories of linear control systems .
