

Labour Law in an Era of Globalization: Transformative Practices and Possibilities (New Edition (2nd & Subsequent))

Throughout the industrial world, the discipline of labor law has fallen into deep philosophical and policy crisis, at the same time as new theoretical approaches make it a field of considerable intellectual ferment. Modern labor law evolved in a symbiotic relationship with a postwar institutional and policy agenda, the social, economic and political underpinnings of which have gradually eroded in the context of accelerating international economic integration and wage-competition. These essays--which are the product of a transnational comparative dialog among academics and practitioners in labor law and related legal fields, including social security, immigration, trade, and development--identify, analyze, and respond to some of the conceptual and policy challenges posed by globalization.
