

# The Practice of Computing using Python

For CS1 courses in Python Programming including majors and non-majors alike. A problem-solving approach to programming with Python. The Practice of Computing Using Python introduces CS1 students (majors and non-majors) to computational thinking using Python. With data-manipulation as a theme, students quickly see the value in what they're learning and leave the course with a set of immediately useful computational skills that can be applied to problems they encounter in future pursuits. The book takes an object-use-first approach. Writing classes are covered only after students have mastered using objects.
